Cutting-edge Modular Mounter

HM520

Hanwha

Specifications

Machine Type		High Speed Machine	LED Machine	Multi Function Machine
The Number of Spindles		20 Spindle x 2 Gantry (Rotary Type)		6 Spindle x 2 Gantry (Piano Type)
Placement Speed		80,000 CPH (Optimum)		60,000 CPH (Optimum)
Placement Accuracy	Chip	±25 μm @ Cpk ≥ 1.0		±40 μm @ Cpk ≥ 1.0
	IC	-		±30 μm @ Cpk ≥ 1.0
Component Range	Size	0201 ~ □ 6 mm		0402 ~ □ 55 mm
	Max. Height	2 mm		15 mm
PCB Size (mm)	Single	Standard: L510 x W580, Option: L750 x W580 (For PCBs less than L460mm, 1 Step placement is available)		
	Dual	Standard: L510 x W310, Option: L750 x W310 (For PCBs less than L460mm, 1 Step placement is available)		
PCB Thickness (mm)		0.3 ~ 4.2		
Feeder Capacity (8 mm Standard)		80 ea (Docking Cart)	8 ea (Fixed Base)	80 ea (Docking Cart)
Utility	Power	3 Phase, AC 200V / 208V / 220V / 240V / 380V / 415V ±10%		
		Max. 4.2 kVA		
	Air Consumption	100 Nℓ/min		
Weight (kg)		Approx. 1,605		
External Dimension (mm)		L890 x D2,370 x H1,921		

Dimension

1,950

Cutting-edge Modular Mounter

HM520

Hanwha

Cutting-edge Modular Mounter

HM520

Actual productivity is highest among machines of the same class and is optimized to high quality production

Configures a flexible production line by applying a modular head and various production modes

Realizes unmanned, non-stop, and zero defect production using the Smart Factory S/W Solution

0.89 m

0.89 m

0.89 m

T-Solution

T-IT

Provides solutions for component misplacement prevention and material production history management

T-OLP

Plans the production order of various PCB files with optimum production conditions

T-PNP

Maintains optimum quality through a real time diagnosis report

T-Mobile

Monitors the production status anywhere, anytime, using a tablet PC and smart watch

HS(High Speed) Head

- 20 Spindle x 2 Gantry
- 80,000 CPH
- ±25 μm @ Cpk ≥ 1.0
- 0201 ~ □ 6 mm (H 2 mm)

MF(Multi Function) Head

- 6 Spindle x 2 Gantry
- 60,000 CPH
- ±30 μm @ Cpk ≥ 1.0
- 0402 ~ □ 55 mm (H 15 mm)
HIGH PRODUCTIVITY

20 Spindle Head

Quickly recognizes 20 spindles simultaneously with the fix camera by designing the head to be small and light.
High Speed and High Definition Fix Camera

Possible to do high speed and high-precision placement of Mini LED chips as well as microchips (0402, 0603) for mobile phone PCBs using the high definition camera without a reduction of actual productivity.
HM Feeder (8 mm)

Developed a new HM feeder, which reduces feeding time by approximately 24%.

HIGH RELIABILITY

Prevents Non-insertion by the Side View Camera

Prevents non-placement of a component by checking for the existence of a nozzle and the posture of a pickup component during production and by performing an inspection before and after component placement. In addition, prevents a pickup/placement error by measuring the component height in real time to correct the deviation of a component (material) automatically.

HS Head

MF Head

Good   No Good

Optimized LED Production

Ensures optimized production with a minimum number of feeders by applying the rotary head, realizing actual productivity of a Max. of 74,000 CPH.

Improved Productivity per Area

Increases the productivity per unit area significantly by minimizing the machine length while increasing the length of an available PCB.
(140% compared to DECAN Series models)
0.89 m

5.4 m
Adopts an Outbuffer

Increases actual productivity by adding an Outbuffer Extension as an option to reduce the transfer time between boards.

2nd Stop

510 x 310

460 x 310   460 x 310   Option 3

Option

Corrects Pickup/Placement Coordinate Automatically

Corrects the X-Y pickup position and prevents misplacement automatically by tracing the COR data based on the center of the nozzle.

NOZZLE   NOZZLE   NOZZLE

Spindle Run-out Correction
Height Sensor

Picks up a component using the height sensor without performing separate teaching and automatically corrects the difference in the placement height due to PCB warping.

Reel

1   2   3   4   5

Recognition of PCB Warp

Individual Recognition of Component Height
Function to Check for LED Component Flip-over

Prevents a defective placement by checking for component flip-over using the Vision Camera.

Normal   For 180° rotation   Flip-over

OK   NG   NG
FLEXIBLE PRODUCTION

Family Job Change

Minimizes the model changing time by arranging the feeders and nozzles in common when producing family models.

Barcode Check
Provides Various Production Modes

Helps the user to achieve the optimum production conditions by selecting a production mode suitable for the production environment.
Different Model Production Mode   Join Mode   Twin Mode   Single Mode
Flexible Applicability to PCBs

Allows mixed production of different models by applying the dual lane, and applies 2 Step placement to be able to respond to up to 750 mm PCBs.

### Improves Convenience When Using Peripheral Devices

It is possible to install a flux dipping unit or 7 sets of 8mm based feeders additionally at the left of the tray feeder. It is also possible to perform cross installation of the tray feeders and docking cart easily within one minute by recognizing them automatically.

Tray Feeder

Docking Cart

SOFTWARE SOLUTIONS

Offline Programming (T-OLP)

- Provides CAD interface, optimization, and line balancing functions.
- Establishes a production plan that considers feeder rearrangement when changing a model using JOB Planning.

Target

Time Shortened by PP

Production Planning

Current

Quantity of production (300, 250, 200, 150, 100, 50, 0)

Time

Component Reel Barcode Issue and Registration (T-Part)

- Creates and manages the component reel information by issuing and registering the reel barcode to the component reel.

Desktop PC

Barcode Printer

Label Paper and Ribbon

Software (T-studio)

Barcode Reader

Possible to Prepare the Feeder in Advance of Production

- Minimizes the model changing time using a docking cart before changing a model.
  - Helps rearrange feeders easily taking into consideration a maximum of 8 sets of docking carts. (Feeder workstation or FLMS)

Barcode Reader

Docking Cart

Table Top Station

Offline Component Registration and Management (T-ELITE)

- Possible to register the information on a new component quickly using the built-in camera.
- Performs integrated management of the change in the component information.
- Possible to easily search / modify / duplicate / delete the component information registered in the Part Database.

Feeder History Management Tool Support (T-Feeder)

- Manages the feeder calibration history to maintain the feeding quality.
- Possible to easily examine the position of the tape feeder necessary for the next production.
Auto JOB Change (T-OLP)

- Uses the 'Production Reservation' function to automatically change the family models (Multi JOB) in order and reduces production time.

M M M M M M

1 2 3 4 5 6
Component Misplacement Prevention

- Inspects collectively whether components supplied by all feeders are the same as those set in the PCB program.
- Prevents misplacement errors by checking whether an appropriate component reel is installed in the corresponding feeder slot.
Production History Management System (LTS)

- Minimizes the range of recall and defective PCB repair that may occur later through the Lot tracking of production.

PCB Barcode Scan   Tape Info. Record   Tray/Stick Info. Record

Lot-Tracking File & DB Save

EtherNET (TCP/IP)

T-Part   T-PVS in Station   Lot-Tracking System   Lot Logging Database

Prevents Production Delay due to a Shortage of Components (T-IT)

- Automatically manages the quantity of components remaining in the reel in use to help prepare components in shortage in advance.
- Adds components in shortage in the Material Request List automatically. Then the material room supplies the components in shortage in real time.

Start a request   Input exhausted component   Add in the list   Finish request

Request state displayed   Print requested material list   Check for prepared materials   Check for material delivery

Factory Monitoring and Remote Control System (T-Mobile)

- Possible to monitor the factory through remote connection and to check the error message of the machine/system.
- Possible to check and control the operation conditions of the machine by remote connection to the machine through a tablet device.

Line Management

Major Production Index (KPI) Management and Monitoring (T-PNP)
- Monitors six production indexes and monitors the trend of each index in real time to help take measures against a problem with the line quickly.

Warning against Production Model Change (T-PNP)
- Warns the user against a production model change in advance to prevent a delay in model changing time.

Production History Inquiry and Reporting (T-PNP)
- Inquires about the production history by major index and supports the reporting function through a production index mailing system.

Analysis of the Cause of Defects by Period (T-PNP)
- Examines the cause of defects by analyzing the trend of the production data during a specific period of time and presents solutions.

Alarm Transmission and Maintenance (T-PNP)
- When a major defect occurs, transmits an alarm to the manager to help them take immediate measures against the cause of the defect at the spot.
M2M Communication Support (T-PNP)
- Prevents a defective placement by sharing data between in-line machines and improves productivity.

ACCESSORY

HM Feeder

Developed a new HM feeder (8mnm), which reduces feeding time by approximately 24% compared to that of existing feeders.

Feeding Time Reduction by
24%

Flux Dipping Unit

Distributes flux by sliding method, allowing high speed and high precision POP packaging.

Flux Application Range (Thickness)	
Film Size	56.5 mm (X) x 56.5 mm (Y)
Film Forming Time	Less than 3 seconds (based on the squeegee reciprocating time)
Control Range	0.015mm ~ 0.35mm (Squeegee Gap)
Minimum Application Thickness Adjustment Unit	
	10 μm
Number of Occupied Slots When Installing	
	7
Flux Viscosity	
	101 ~ 20 Pa.S (Operating Temperature 24 ± 4℃)

Stick Feeder

Applicable Stick Size (mm)	Min. 300(L) Max. 34(W) x 600(L) x 9 Max. Stick Width: 13mm (when applying 2 sticks)
Installable Stick Quantity	2
Number of Occupied Slots	5
Range of Applicable Components (mm)	Min. 5 x 5 x 1.5 Max. 31 x 31 x 6
Types of Applicable IC Chips	Small Odd-shape Component / Insert Component SOP Type (Small Outline Package) SOJ Type (Small Outline J-lead) QFP Type (Quad Flat Package) PLCC Type (Plastic Leadless Chip Carrier)

Tray Feeder

Outline Dimension (mm)	564.6(W) x 750(L) x 918.2(H)
Weight (kg)	Max. 190
Tact Time	4.6 seconds (Single staged → 10-staged)
Tray Size (mm)	Min. 200 x 100 Max. 320 x 230
Magazine	1 Tray / Pallet 10 Pallet / Magazine 2 Magazine / Tray Feeder

Tray Feeder Equipped with a Tape Feeder

Tray Feeder Equipped with a Flux Dipping Unit
